

IP-22 Wi-Fi BULLET CAMERA

These days, most cameras are wireless. They are digital cameras that connect to your surveillance system through an internet connection. Footage can be viewed from a PC or smart phone. Wireless cameras are very easy to install because there are no wires that need to be run through the house and connected to various devices.

Also sometimes referred to as a outdoor camera, these cameras are small and have a fixed lens. They can be used both indoors and outdoors but are not pan / tilt / zoom capable. These cameras are discreet due to their small size and work great for filming a fixed location.
