

IP-54 PTZ CAMERA

A pan-tilt-zoom camera (PTZ camera) is a camera that is capable of remote directional and zoom control.

In television production, PTZ controls are used with professional video cameras in television studios, sporting events, and other spaces. They are commonly referred to as robots, an abbreviation of robotic camera. These systems can be remotely controlled by automation systems. The PTZ controls are generally sold separately without the cameras, but can also be sold as a set, as in the case of Fletcher cameras.

Features
